Facing Our Future: Key Messages
April 2011

Agenda

- Introduction
- Understanding the Current Environment
- Research Findings
- Our Future
 - Key Findings
- Conclusion and Next Steps

Introduction

- What is *Facing Our Future*?
 - Organized, independent effort
 - Conducted without hidden agenda, partisanship, political motivation or bias
 - Provides objective data on current and future condition of NJ's state and local gov't fiscal crises
 - Presents reality of NJ's future at all levels of gov't
 - Fosters environment of informed public discussion and impact of crisis – and future of NJ
- Raise important questions
 - What do we need to understand about current crisis?
 - Is gov't able to meet needs and requirements of citizens in 21st century?
 - How can we foster discussion about NJ's future priorities, needs and requirements?

What *Facing Our Future* doesn't do:

➤ *Doesn't assess blame*

➤ *Doesn't offer specific recommendations*

➤ *Doesn't second-guess any decisions made to date*

Understanding the Current Environment

- **All levels of NJ gov't are in crisis**
 - Significant structural shortfalls ('gaps') at all levels of gov't
 - Restricts NJ's ability to function and thrive for short- and long-term
 - Huge unfunded liability for public employee pensions and health benefits

- **Way gov't raises and spends money can't be sustained**
 - Projected gaps result in estimated decreases of 20%+ of services

- **Complex, interconnected relationships exist across levels of gov't**
 - Holistic approach *required* (changes at one level affect others)

To understand our future, we must understand the present.

The Environment: *Current Budget and Services (state level)*

- Review FY2009 and FY2010, NJ's two most recent fiscal years
 - Largest % decrease in revenue in state's history
 - Overall decrease in state revenue from \$32.6 billion (FY2008) to \$27.9 billion (FY2010)

 - Address retirement program costs and extensive, serious long-term liabilities
 - Total unfunded liability of **\$94 billion**
 - State pension systems – including teachers' system – is \$37 billion (56.4% funded)
 - Post-retirement medical benefits is \$56.8 billion (No future years costs funded)
- 

The Environment: *Current Budget and Services (local gov't levels)*

- FY2004 - FY2009 (municipal budgets)
 - More dependent upon property tax and state aid
 - Other miscellaneous revenue decreased by almost 8%
 - Used surplus funds to balance budgets

- Similar patterns at county and school district levels

- Costs continue to increase

- Problem: retirement program costs with extensive, serious long-term liabilities
 - Aggregate unfunded liability for pensions at municipal and county levels of gov't
 - Pensions: total unfunded liability is \$16.7 billion (70% funded)
 - Retirement medical benefits: \$10 billion

The Environment: *An Independent Indicator*

- Severe downturn in national economy
- Would take five years for a state gov't to return to peak revenue levels
- Ongoing recession makes growth of this magnitude unlikely
- Problem with revenues and spending will only be exacerbated

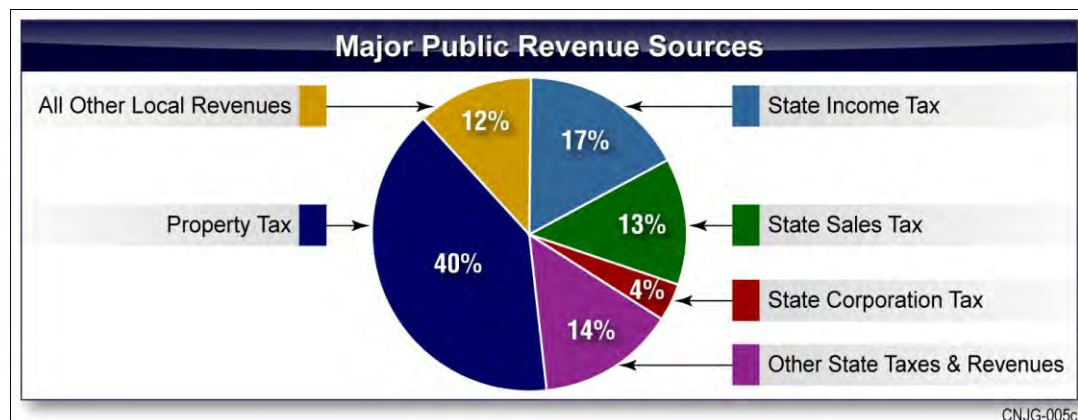

For NJ, it would take until 2014 to match the peak revenue levels of FY2008.

The Environment: *Identify Gov't Revenues and Spending Gap*

- Provide common, shared basis of information
 - How does gov't in NJ obtain its money?
 - Where does gov't in NJ spend its money?
 - How does our gov't deliver services, and is the delivery efficient and effective?
- Share clear, short summaries of information at macro-level
 - Don't present all sources of revenue
 - Don't itemize every dollar spent in NJ
 - Do present aggregate picture
 - At each level of gov't
 - For all levels combined

The Environment: *How Does Gov't in NJ Obtain Money?*

- Shows combined revenue sources for all levels of gov't: state, municipal, county and school district
- Property tax
 - Represents 40% of all money raised by 'gov't' in NJ
 - None of this is raised by state gov't
- State income tax
 - Represents 17% of all money raised by 'gov't' in NJ
 - All of this is raised by state gov't
 - All of this is paid to local gov't (principally school districts)

NOTE: We've identified only major sources of revenue, and have adjusted figures so that 'aid' is counted only once.

The Environment: Where Does *Gov't* in NJ Spend Its Money

- Shows combined spending for all levels of gov't: state, municipal, county and school district
- 40% of all money spent by 'gov't' in NJ supports schools
 - Includes money spent directly by school districts
 - Includes state aid provided to schools through the state gov't

NOTE: We've identified only major sources of spending, and have adjusted figures so that 'aid' is counted only once.

The Environment: *Delivery, Efficiency and Effectiveness of Gov't Services*

- Delivery: employees directly provide gov't services
 - Trend: decrease in total number of gov't employees
 - Trend: no decrease in scope of gov't responsibilities

- Efficiency: deteriorating structure
 - Aging workforce
 - Loss of significant institutional knowledge and experience
 - Workload shift to remaining employees
 - No significant investment in technology improvements

- Effectiveness: complexity of gov't organization and operation
 - Duplication across levels of gov't
 - Multiple jurisdictions – all with taxing and expenditure authority
